

Marewa Street DUNEDIN

This 70 year old home required a significant remodel which saw the under floor piles removed and a whole new storey built under the existing home.

The build incorporated two new bedrooms, an office, an additional bathroom and a new stairway running between the existing and new levels.

There was also the addition of a new upper bathroom, kitchen and extensive layout changes along with removal of all windows, which were replaced with new aluminium double glazed units. The renovation was finished off with new entrance lobbies both front and back. All of this happened while the owner lived on site within the dwelling.

Ultimately an exceptional renovation which was so much more than a facelift.
